Key Concepts in IGCSE Chemistry

To excel, students must understand and memorize core concepts. Here, we break down some fundamental ideas.

Atomic Structure

Atoms consist of protons, neutrons, and electrons. Protons (+) and neutrons (neutral) are in the nucleus. Electrons (-) orbit the nucleus in shells. Atomic number = number of protons. Mass number = protons + neutrons. Isotopes are atoms with the same number of protons but different neutrons.

The Periodic Table

Organized by increasing atomic number. Elements are grouped into periods (rows) and groups (columns). Elements in the same group have similar chemical properties. Key groups: Alkali metals (Group 1), Halogens (Group 7), Noble gases (Group 0).

Chemical Bonding

Ionic bonds: formed between metals and non-metals. Covalent bonds: formed between non-metals. Metallic bonds: between metal atoms. Properties depend on type of bonding: melting point, conductivity, solubility.
