- Hypertensive Disorders:** Includes preeclampsia and gestational hypertension. ACOG recommends blood pressure control, magnesium sulfate for severe preeclampsia, and timely delivery planning.
- Diabetes Mellitus:** Gestational and pregestational diabetes require glucose monitoring, dietary management, insulin therapy when needed, and fetal surveillance.
- Multiple Gestations:** Close monitoring of fetal growth, amniotic fluid levels, and early delivery planning if complications arise.
- Infections:** Screening and treatment for infections like Group B Streptococcus, urinary tract infections, and sexually transmitted infections are essential.

Labor and Delivery Management Guidelines provide recommendations for labor management to ensure safety:

- Use of continuous fetal monitoring when indicated.
- Appropriate management of labor progression, including induction or augmentation when necessary.
- Decision-making regarding cesarean delivery based on obstetric indications.
- Pain management options, including epidural anesthesia.

Postpartum Care and Follow-Up Postnatal care is pivotal for recovery and long-term health:

- Monitoring for postpartum hemorrhage and infections.
- Screening for postpartum depression and providing mental health support.
- Contraceptive counseling and family planning.
- Management of chronic conditions that may have been unaddressed during pregnancy.
- Assessment of breastfeeding support and counseling.

Specific Screening and Prevention Recommendations ACOG emphasizes several preventive measures and screenings to enhance perinatal outcomes.

- Genetic Screening and Counseling** Carrier screening for conditions like cystic fibrosis, Tay-Sachs disease, and sickle cell anemia, especially in populations at risk.
- Discussing options for diagnostic testing, such as chorionic villus sampling or amniocentesis, based on screening results and maternal age.
- Vaccinations** Influenza vaccination during pregnancy to prevent maternal and fetal complications.
- Tdap vaccination between 27 and 36 weeks gestation to protect neonates from pertussis.
- Updating other routine immunizations as indicated.
- Screening for Mental Health** Routine depression screening during pregnancy and postpartum.
- Providing resources and referrals for mental health support when necessary.

Updates and Emerging Areas in Perinatal

- Genetic screening: First-trimester combined screening or cell-free DNA testing
- Gestational diabetes screening: 24-28 weeks via oral glucose tolerance test (OGTT)
- Group B streptococcus (GBS) screening: 35-37 weeks

Monitoring fetal growth: Serial ultrasounds if indicated

The emphasis is on personalized care, adjusting screening based on individual risk profiles, and ensuring informed consent.

2. Management of Common Obstetric Conditions

ACOG provides detailed protocols for prevalent issues:

- Hypertensive disorders:** Gestational hypertension, preeclampsia, eclampsia
 - Regular blood pressure monitoring
 - Laboratory assessments (liver enzymes, platelet count)
 - Management strategies include antihypertensives and magnesium sulfate for seizure prophylaxis
