Sample Topics and Corresponding ATI Med Surg Final Test 2014 Answers BreakdownBelow, we explore some typical questions you might encounter, with a detailed explanation of the correct answers and rationale.

Cardiac DisordersQuestion Example:A patient with heart failure has a serum BNP level of 900 pg/mL. Which of the following are expected findings?A) Dyspnea on exertionB) Jugular vein distentionC) OrthopneaD) Edema in the lower extremitiesCorrect Answers: A, B, C, DExplanation:Serum BNP levels above 300 pg/mL typically indicate heart failure. Elevated BNP correlates with volume overload and cardiac stress, which manifest as dyspnea, JVD, orthopnea, and peripheral edema. Recognizing these signs helps in prompt diagnosis and management.

Respiratory ConditionsQuestion Example:A client with pneumonia is prescribed oxygen therapy. Which interventions are appropriate?A) Monitor oxygen saturation levels regularlyB) Encourage coughing and deep breathing exercisesC) Administer antibiotics as orderedD) Limit fluid intake to reduce pulmonary congestionCorrect Answers: A, B, CExplanation:Oxygen monitoring ensures adequate oxygenation. Coughing and deep breathing promote lung expansion and clearance. Antibiotics target the infection. Limiting fluids is not typically advised unless there is pulmonary edema, so D is incorrect unless specified.

Pharmacology FocusQuestion Example:A nurse administers furosemide. Which adverse effects should the nurse monitor for?A) HypokalemiaB) HypotensionC) OtotoxicityD) HyperglycemiaCorrect Answers: A, B, CExplanation:Furosemide is a loop diuretic that can cause hypokalemia, hypotension, and ototoxicity, especially with rapid IV administration. Hyperglycemia is less common but can occur in diabetic patients, but it isn't a primary adverse effect to monitor acutely.

Infection ControlQuestion Example:Which actions demonstrate proper infection control practices?A) Performing hand hygiene before and after patient contactB) Using gloves when handling bodily fluidsC) Disposing of sharps in a puncture-proof containerD) Reusing disposable gloves for multiple patientsCorrect Answers: A, B, CExplanation:Hand hygiene, gloves, and proper sharps disposal are fundamental infection control measures. Reusing disposable gloves is unsafe and increases infection risk.
