Mathematical Modeling of Dynamic Systems

State-Space Representation

Most modern control techniques rely on state-space models, which provide a comprehensive description of system dynamics:

$$\begin{cases} \dot{x}(t) = A x(t) + B u(t) \\ y(t) = C x(t) + D u(t) \end{cases}$$

Where:

- $x(t)$ is the state vector

Modern control theory integrates adaptive control to modify controller parameters in real-time based on system behavior, and robust control to maintain performance despite uncertainties and disturbances, thereby enhancing the reliability of feedback control in dynamic systems.
