Detailed Solutions to Common Exercises in Topic 13

Exercise 1: Representing Fractions
Question: Shade $\frac{3}{4}$ of the rectangle below.
Solution: To shade $\frac{3}{4}$ of a rectangle, divide the rectangle into 4 equal parts, then shade 3 of those parts. Explain that because 3 parts are shaded out of 4 total parts, the shaded area represents $\frac{3}{4}$.

Exercise 2: Finding Equivalent Fractions
Question: Show that $\frac{1}{2}$ is equivalent

to $\frac{2}{4}$. Solution: Use visual models or cross-multiplication: Visual Model: Draw a rectangle divided into 2 parts; shade one part to represent $\frac{1}{2}$. Then divide the same rectangle into 4 parts, shading two to show $\frac{2}{4}$. Both shaded areas are equal. Cross-Multiplication: Multiply numerator and denominator of $\frac{1}{2}$ by 2: $(1 \times 2) / (2 \times 2) = \frac{2}{4}$. Since both fractions are equal numerically, they are equivalent.

Exercise 3: Comparing Fractions Question: Which is greater: $\frac{3}{8}$ or $\frac{1}{2}$? Explain your reasoning. Solution: Convert to common denominators or compare decimal equivalents: Convert $\frac{1}{2}$ to eighths: $\frac{1}{2} = \frac{4}{8}$. Now compare $\frac{3}{8}$ and $\frac{4}{8}$. Since $\frac{3}{8} < \frac{4}{8}$, $\frac{1}{2}$ is greater. Alternatively, convert to decimals: $\frac{3}{8} = 0.375$, $\frac{1}{2} = 0.5$. Because $0.5 > 0.375$, $\frac{1}{2}$ is greater.

Exercise 4: Adding Fractions with Like Denominators Question: Add $\frac{2}{5}$ and $\frac{1}{5}$. Simplify if necessary. Solution: Since the denominators are the same, add the numerators: $2 + 1 = 3$ Answer: $\frac{3}{5}$

Exercise 5: Solving a Fraction Word Problem Question: A pizza has 8 slices. If 3 slices are eaten, what fraction of the pizza remains? Solution: The remaining slices are $8 - 3 = 5$ slices. Fraction remaining = $\frac{5}{8}$ Answer: $\frac{5}{8}$ of the pizza remains.

- Compare fractions using models and number lines.
- Add and subtract fractions with unlike denominators, emphasizing the importance of finding common denominators.
- Solve real-world problems involving fractions, including sharing and partitioning.

By mastering these skills, students are better prepared to tackle more complex mathematical challenges and enhance their reasoning abilities.

Learning Objectives in Topic 13

The overarching goals for students in this topic include:

- Understanding the concept of equivalent fractions.
- Applying strategies to compare fractions effectively.
- Demonstrating proficiency in adding and subtracting fractions with unlike denominators.
- Applying fractions to solve practical problems involving measurement, division, and sharing.

The lessons are designed to be interactive, often involving visual models such as fraction strips, number lines, and pie charts to facilitate conceptual understanding.

Typical Question Types and Their Answers

In Topic 13, the questions are crafted to test both conceptual understanding and procedural skills. Below, we analyze common question types along with detailed solutions.

1. Comparing Fractions

Sample Question: Compare $\frac{3}{4}$ and $\frac{2}{3}$. Which is greater? Explain your reasoning.

Answer: To compare $\frac{3}{4}$ and $\frac{2}{3}$, students can find a common denominator or convert fractions to decimals.

Method 1: Common Denominator

Find the least common denominator (LCD) of 4 and 3, which is 12.

Convert each fraction: $\frac{3}{4} = \frac{(3 \times 3)}{(4 \times 3)} = \frac{9}{12}$

$\frac{2}{3} = \frac{(2 \times 4)}{(3 \times 4)} = \frac{8}{12}$

Since $\frac{9}{12} > \frac{8}{12}$, $\frac{3}{4}$ is greater than $\frac{2}{3}$.

Method 2: Cross-Multiplication

Compare 3×3 and 4×2 : $3 \times 3 = 9$, $4 \times 2 = 8$

Since $9 > 8$, $\frac{3}{4} > \frac{2}{3}$.

Key Takeaway: The answer is that $\frac{3}{4}$ is greater than $\frac{2}{3}$ because $\frac{9}{12} > \frac{8}{12}$ or $9 > 8$ in cross-multiplied form.

2. Adding Fractions with Unlike Denominators

Sample Question: Add $\frac{1}{2}$ and $\frac{1}{3}$.

Answer: Find the least common denominator (LCD): 6.

Convert each fraction: $\frac{1}{2} = \frac{3}{6}$, $\frac{1}{3} = \frac{2}{6}$

Add the numerators: $3 + 2 = 5$.

Write the sum as a fraction: $\frac{5}{6}$.

Result: $\frac{1}{2} + \frac{1}{3} = \frac{5}{6}$.

Note: Students should always simplify their answers if possible, but in this case, $\frac{5}{6}$ is already in simplest form.

3. Subtracting Fractions with Unlike Denominators

Sample Question: Subtract $\frac{3}{4}$ from $\frac{2}{3}$.

Answer: Find LCD: 12.

Convert fractions: $\frac{2}{3} = \frac{8}{12}$, $\frac{3}{4} = \frac{9}{12}$

Subtract: $\frac{8}{12} - \frac{9}{12} = -\frac{1}{12}$.

Since the result is negative, the answer is $-\frac{1}{12}$.

Important: Understanding that subtraction can lead to negative fractions is crucial, especially in contexts like temperature changes or debt.

4. Applying Fractions in Word Problems

Sample Question: A recipe calls for $\frac{3}{4}$ cup of sugar. If you want to make half the recipe, how much sugar will you need?

Answer: To find half, multiply $\frac{3}{4}$ by $\frac{1}{2}$: $\frac{3}{4} \times \frac{1}{2} = \frac{(3 \times 1)}{(4 \times 2)} = \frac{3}{8}$.

Result: You need $\frac{3}{8}$ cup of sugar for half the recipe.

Simplify: $30 = 5x$

Solve for x: $x = \frac{30}{5} = 6$

Answer: 6 cups of sugar

Sample Word Problem

Question: A car travels 150 miles on 5 gallons of gasoline. How far can it travel on 8 gallons?

Response Strategy: Determine the rate: 150 miles / 5 gallons = 30 miles per gallon

Multiply to find distance on 8 gallons: 30 miles/gallon $\cdot$ 8 gallons = 240 miles

Answer: The car can travel 240 miles
